Gary Davis  
Tree Warden  
Town of Carlisle

Dear Mr. Davis:

Due to the poor service reliability of the 512-1399H1 electrical circuit in Carlisle, Eversource is proposing to perform enhanced tree pruning to mitigate the ongoing issue. The enhanced tree pruning, or "Resiliency Tree Work" would remove all tree limbs 25' above, and 15' to the sides of the uppermost primary electrical conductors. This "RTW" tree clearance specification would be an enhancement to the current standard clearance spec of 15' above and 10' to the sides of the primary conductors.

This work is proposed as a direct result of the inordinate number of tree related electrical outages that have occurred throughout the 512-1399H1 circuit over the past few years. Completing this tree work in conjunction with the removal of hazardous trees from private and public property will be imperative to ensure uninterrupted electrical service to Carlisle residents, businesses, and public buildings.

The following streets are being considered for the "RTW" spec due to their importance in distributing power to the electrical grid.

Bedford Rd.	Westford St.	West St.
East St.	School St.	Acton St.
Lowell St.	Concord St.	Cross St.
Rutland St.	Russell St.	Curve St.
North Rd.	South St.	

I will have the resources and manpower to complete the work for a limited time, so I would like to begin cutting on Monday 3/12/18. I'll await your response before beginning any tree work.

Thank You,

Christopher Gonzalez
