Since the Board cancelled Wednesday's meeting I thought I would update you on a few items.

TOWN CLERK-CARLISLE
CHARLENE M. HINTON

Please be advised that Meisner Brem Corp. intends to submit revised plans to Nitsch Engineering by Friday, Feb. 6, 2015. This is a slight delay in the original schedule caused by this week's storm and other related factors.

Additionally, please note that Joel Frisch of Northeast Geoscience has supervised and completed the installation of 6 wells on the property with their attendant split spoon soil sampling, etc. on January 19, 2015. The wells are above the ground by about 2 feet. These wells need to be located by survey. Unfortunately, the big storm buried them and they now need to be found and dug out. They are 2" white pvc pipes – very brittle and easy to break. They are also very hard to discern against the snow. Additionally, the snow plower decided to use one of the areas for a small pile shown on the photo below, which requires a bit more hand digging. I intend to do this during this coming weekend. The others will also need to be located then dug. Then they will be surveyed and tested. At this point I am not sure if this delay will cause a delay in the submittal of the report which, if you recall, we expect to be done by the end of February.

Lastly, I cannot attend the newly scheduled meeting of February 4 but Doug is planning on attending.
